WHITEPAPER

INTRO DUCTION

Established in December 2023, Pulse Network emerges as a comprehensive DeFi protocol, offering 3 primary services accompanied by various sub-features. Our goal is to simplify the process of initiating and launching a Solana project, ensuring maximum safety for prospective investors. With all the essential elements for launching your desired project on the Solana chain, we cover everything from initial setup to securing liquidity post a successful launch

PULSE

INITIAL LIQUIDITY OFFERING (ILO)/ LAUNCHPAD

The ILO/presale service, crafted to cater to the requirements of both investors and developers, provides diverse options for creators to customize their presale according to their preferences, ensuring transparency for investors. In addition to standard features, we present audit and KYC badges, carried out by our whitelisted partners, offering users extra insights into the presale they intend to join.

PULSE

LIQUIDITY LOCKER

When developers list their tokens on decentralized exchanges, they receive LP tokens for contributing liquidity to the pool. However, the risk arises when these LP tokens are unlocked, as it opens the possibility of developers absconding with investors' funds by depleting pool liquidity. In 2023, we introduced Liquidity Lockers to address this concern, safeguarding investors and enhancing the security of investments. The locked tokens remain in a smart contract for a predetermined duration, preventing any withdrawal of liquidity from the pool until the unlock date has elapsed.

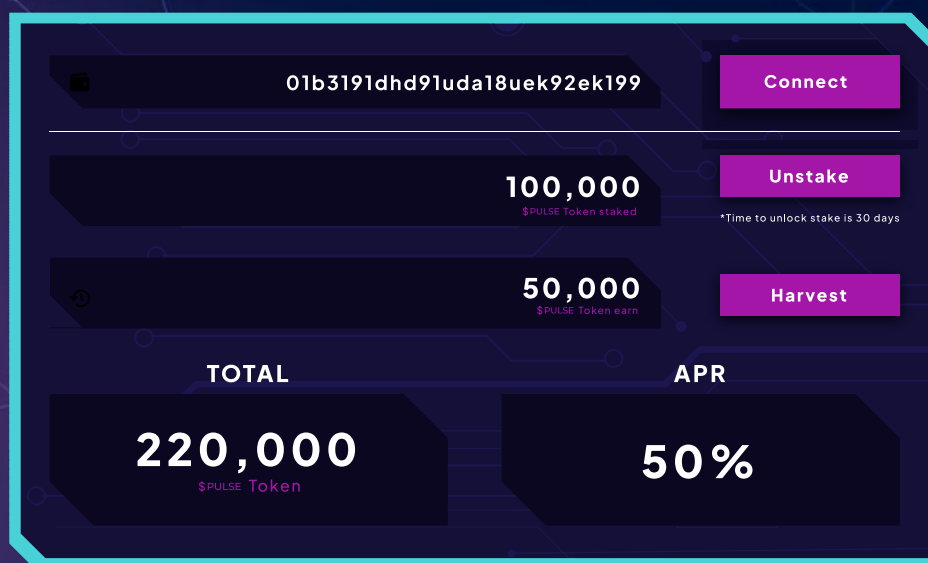

PULSE

STAKING/ STAKING-AS-A-SERVICE

Through our staking contract and user interface, developers can establish custom staking pools for their communities to stake their preferred tokens. Additionally, developers can reward their communities with tokens of their choosing through dedicated reward pools.

Investors benefit from two boost options: time boost and pulse boost, providing heightened share weight and rewards.

DISCLAIMER

While we strive to safeguard investors from potential scams, it's crucial to note that our platform is entirely decentralized, enabling anyone to create and launch a project through our launchpad. Prior to investing, always conduct your own research (DYOR) to understand the associated risks. This documentation does not constitute financial advice.
